

ABSTRACT OF THE DISCLOSURE

2
3 The present invention also provides a dynamic on-line order gathering system that
4 enables sellers to offer one or a combination of goods whose availability
5 (production and/or shipping) may be economically linked in some ways with other
6 items and which facilitates aggregation of demand across related items so as to
7 enable the ability to reach critical mass of demand for the related goods by a more
8 efficient means than currently available.
